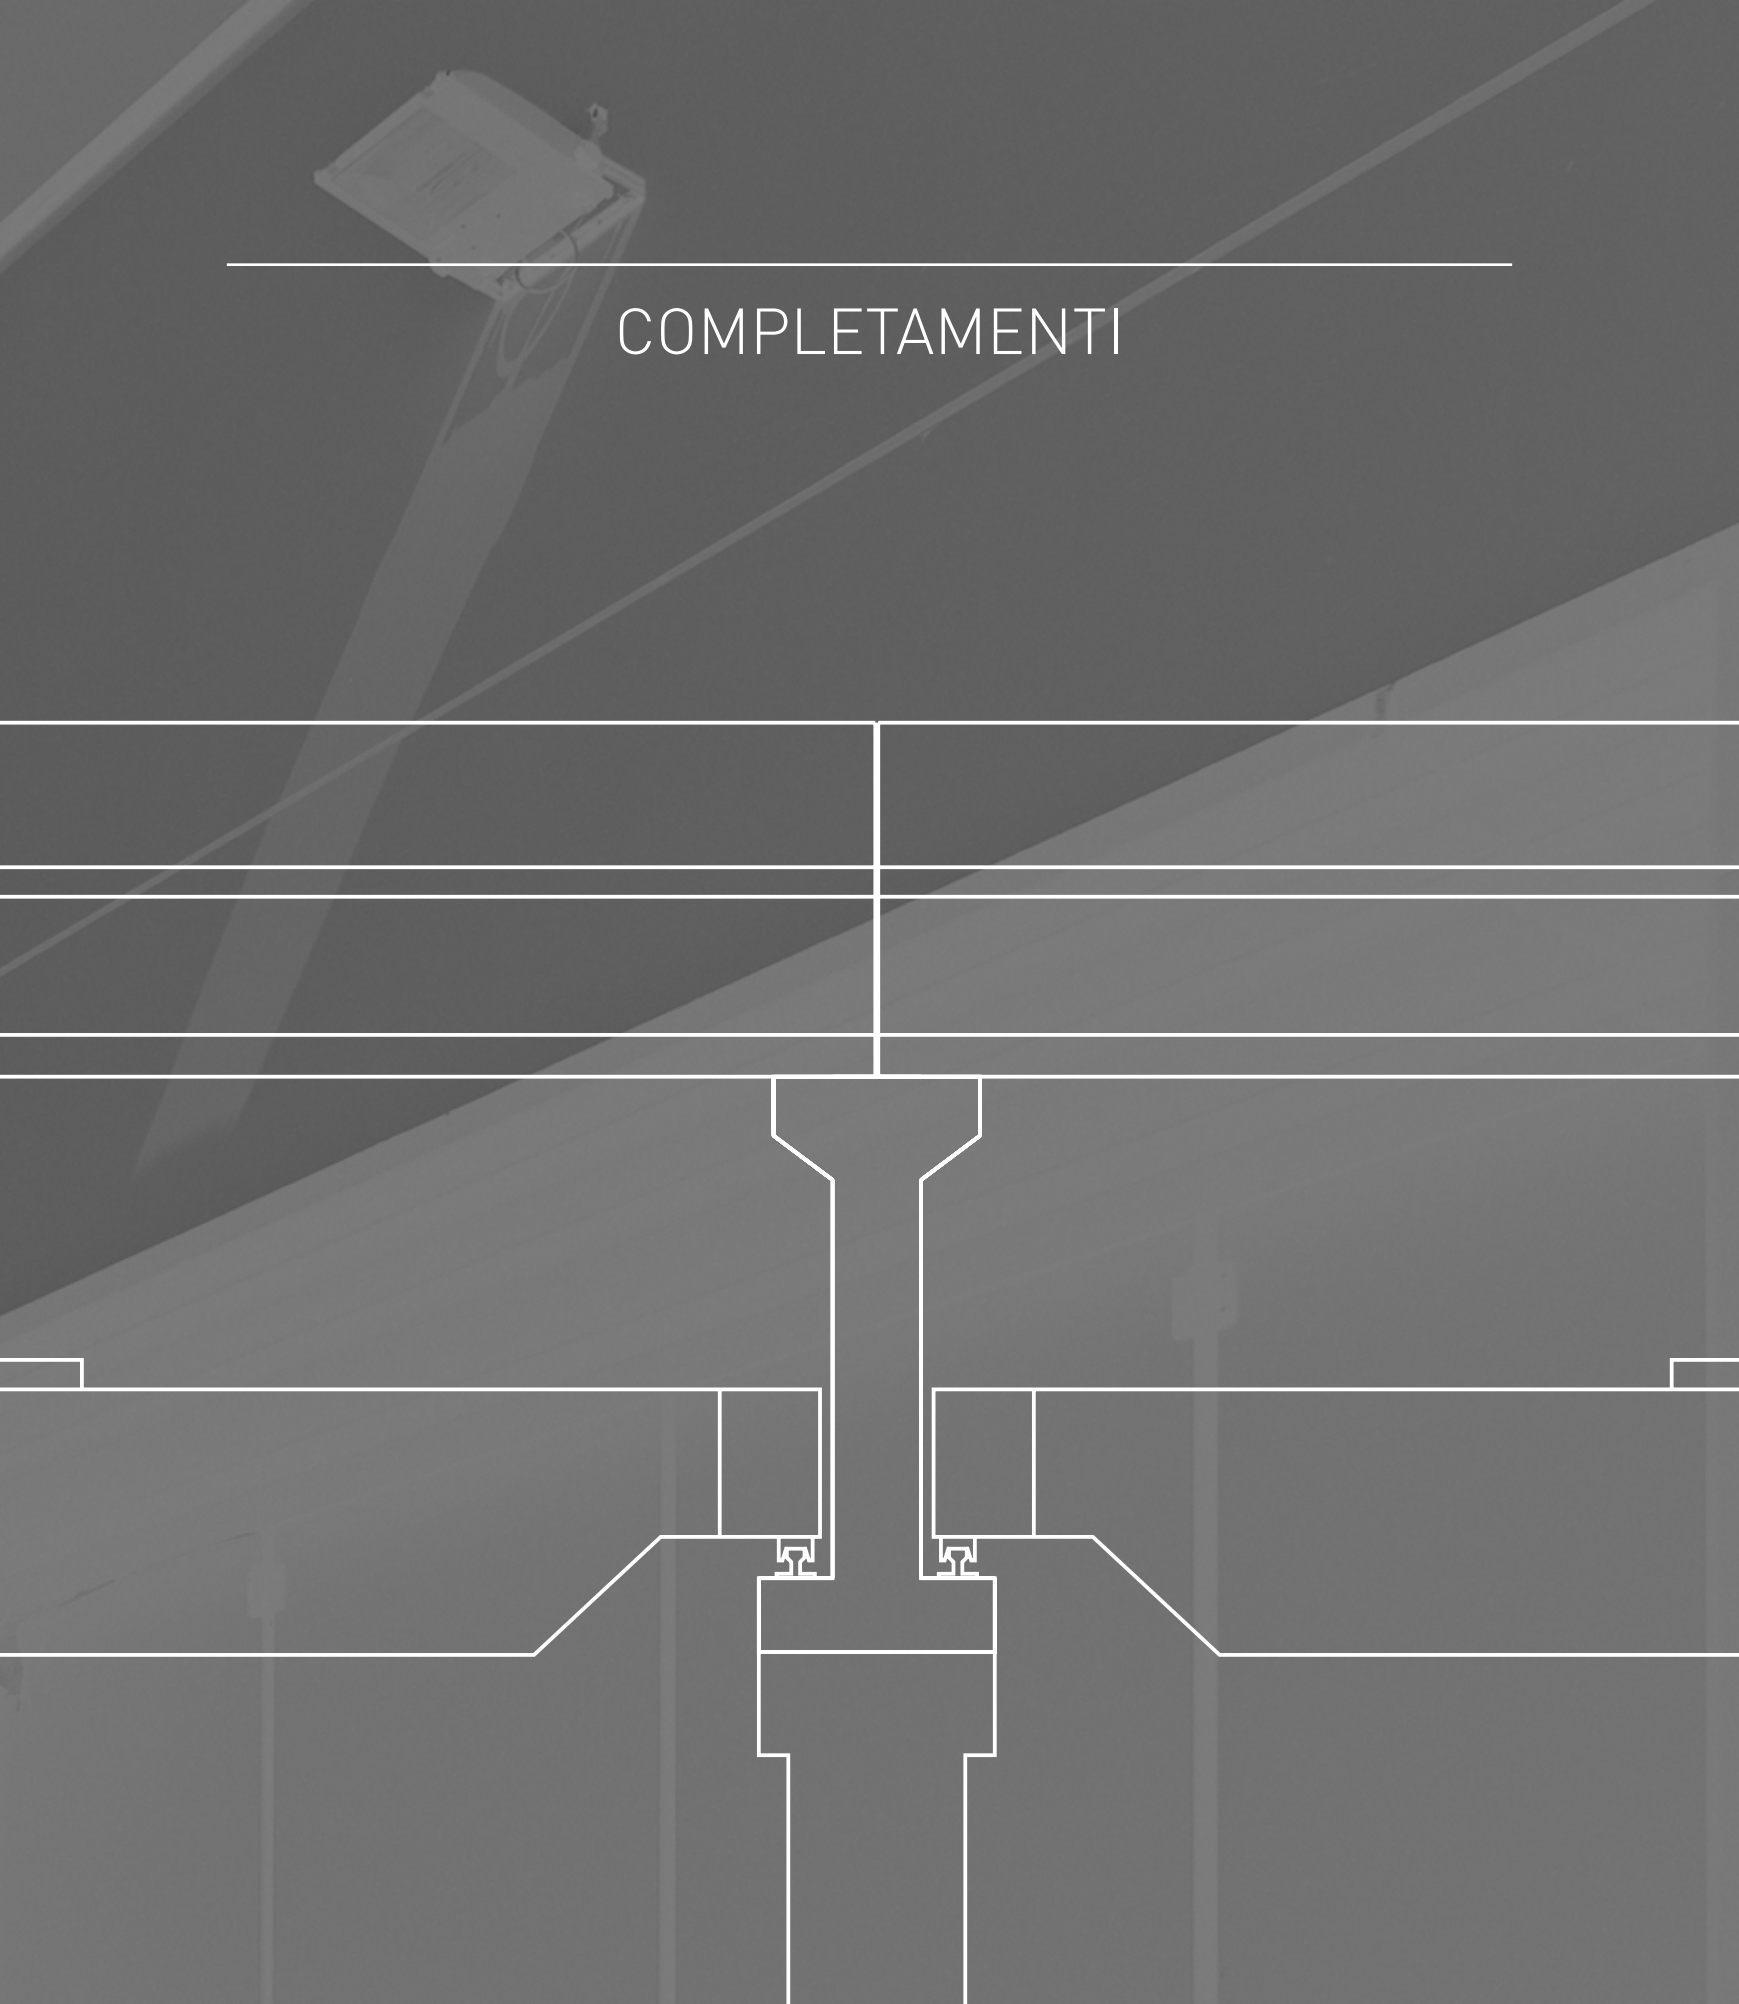
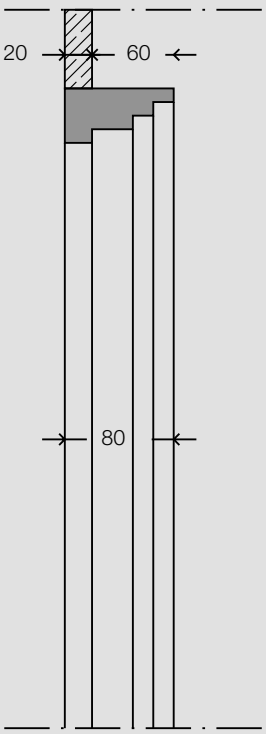
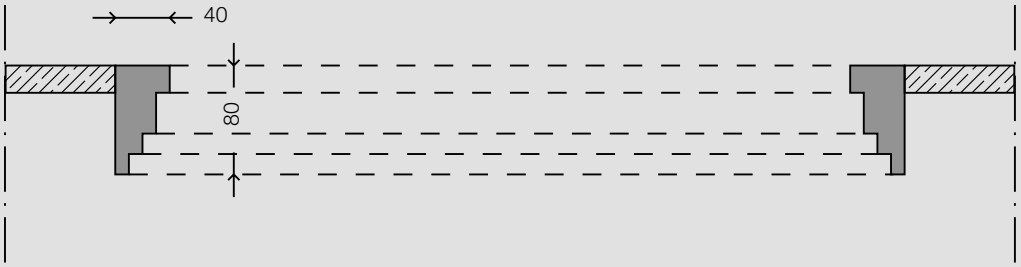
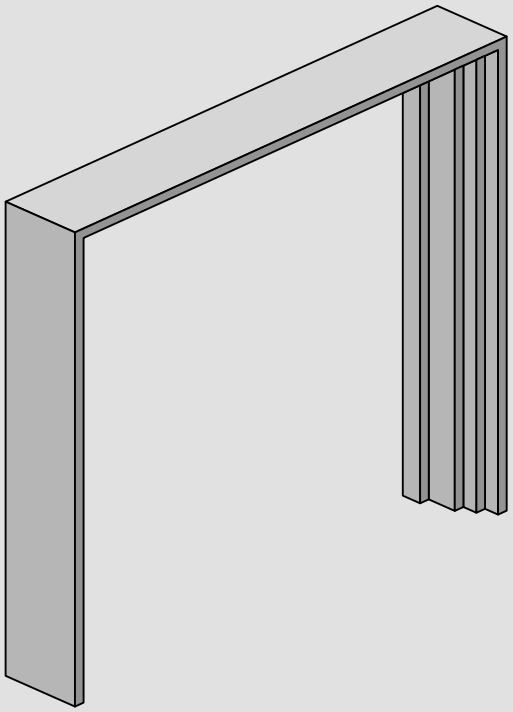
COMPLETAMENTI



PORTALE SAGOMATO

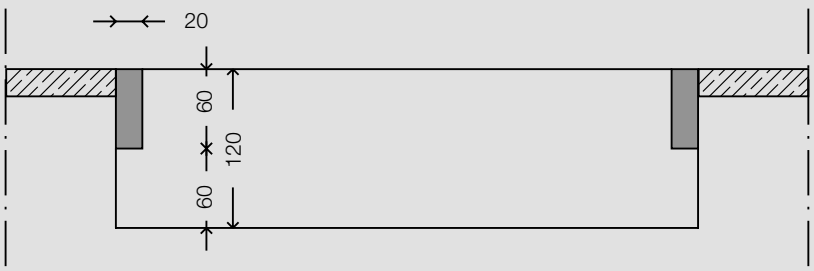


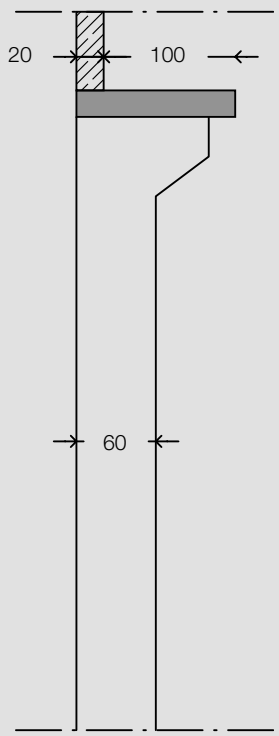


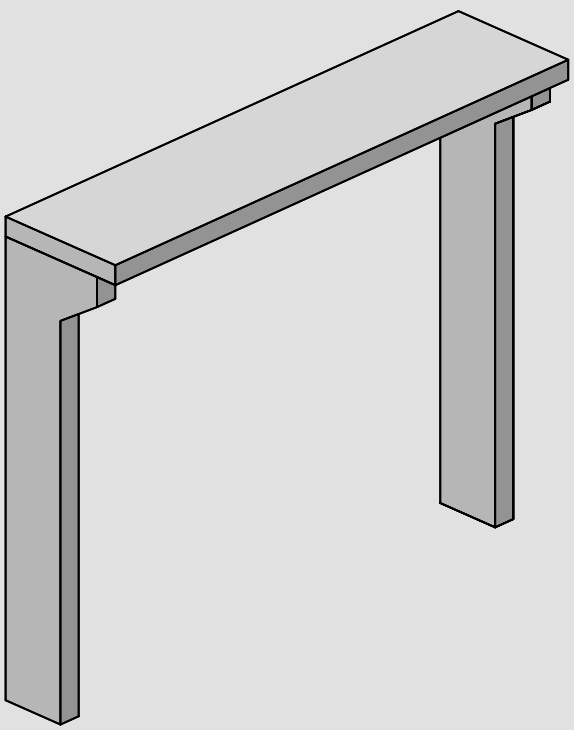


Geometria del portale sagomato, particolarmente indicato per movimentare architettonicamente i prospetti.

PORTALE PIANO

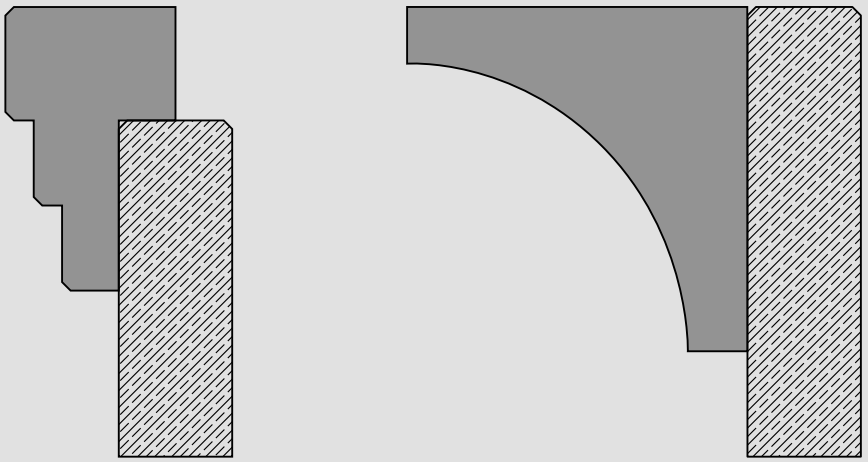






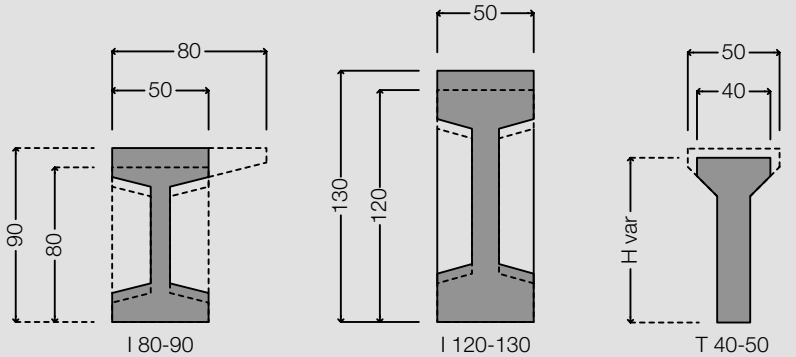
Geometria del portale piano che crea una piccola pensilina al di sopra dei portoni di ingresso.

CORNICIONI SAGOMATI



Per arricchire architettonicamente la vista esterna degli edifici, si realizzano cornicioni utilizzando casseri già esistenti o mettendo a punto profili e impianti personalizzati per ogni committente.

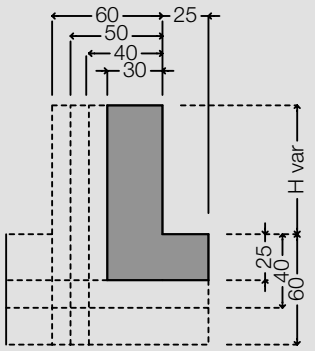
TRAVI



Con base 40: H = 70 / 80 / 90 / 100 / 110

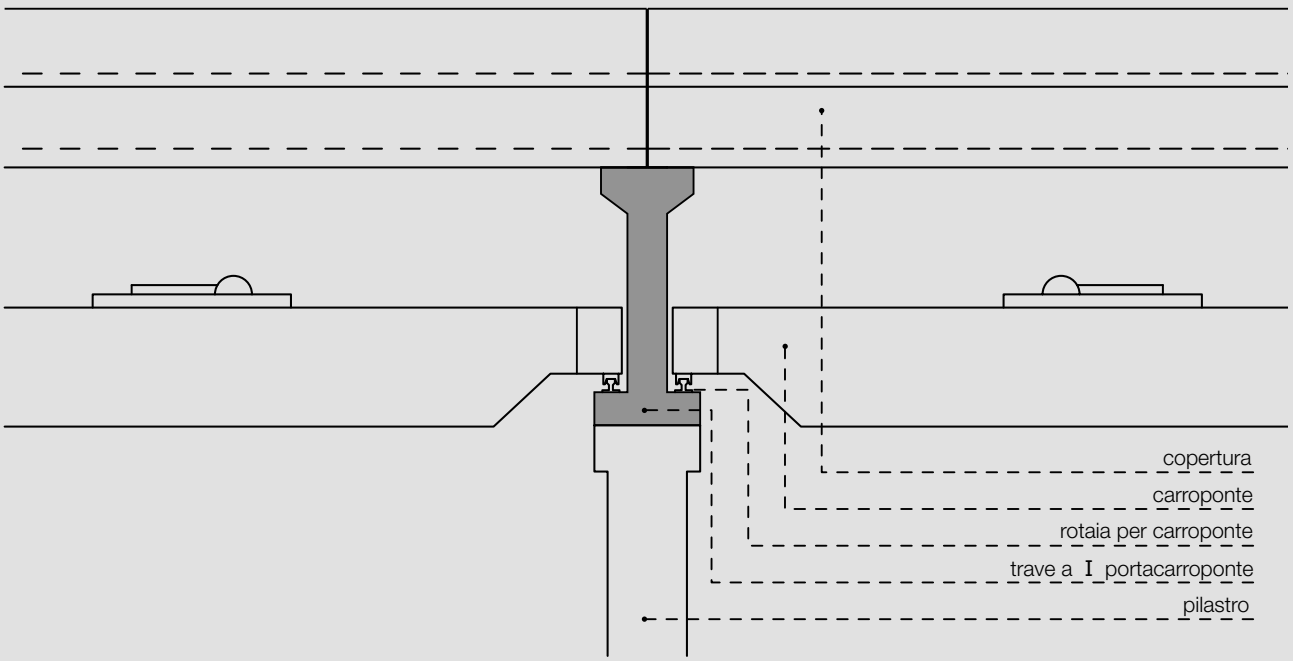
Con base 50: H = 75 / 85 / 95 / 105 / 115

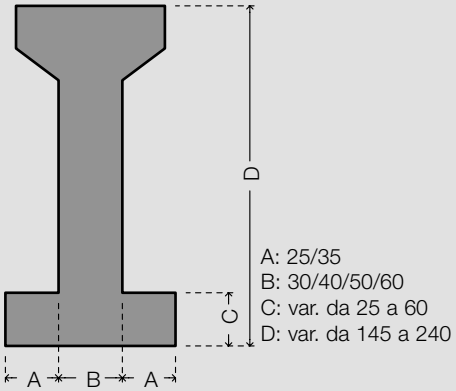
Geometria dei casseri delle travature più comuni.



H: 20 / 30 / 40 / 50 / 60 / 70 / 80 / 90

TRAVI PORTACARROPONTE

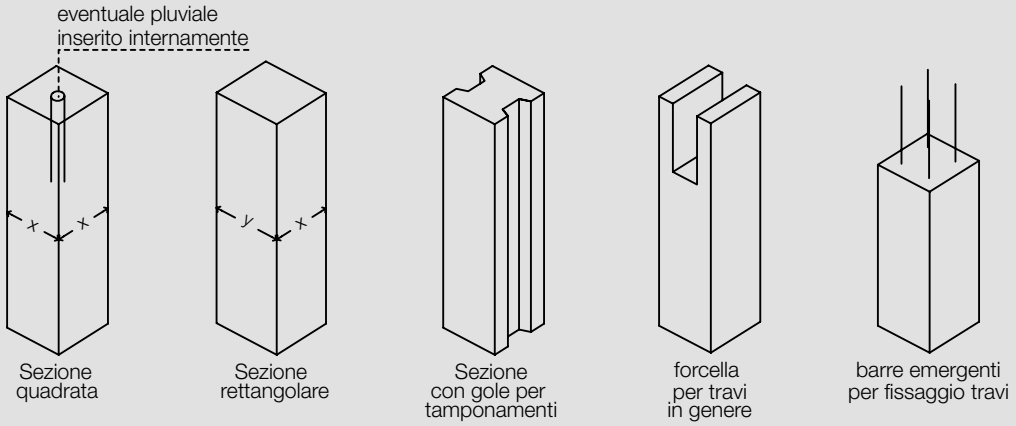




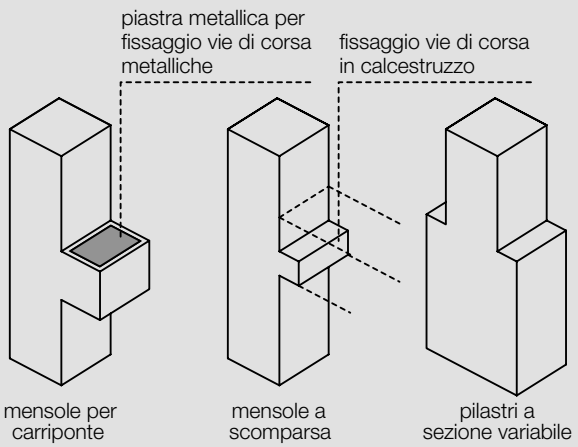
A: 25/35
B: 30/40/50/60
C: var. da 25 a 60
D: var. da 145 a 240

Geometria di travi ad "I" porta carroponte, con appoggio in sommità degli elementi di copertura e sulle ali inferiori lo scorrimento del carroponte.

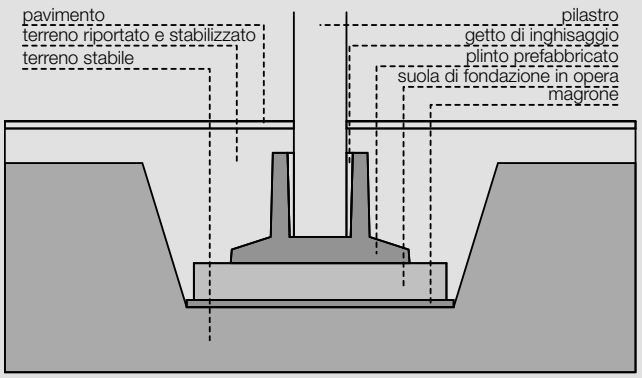
PILASTRI



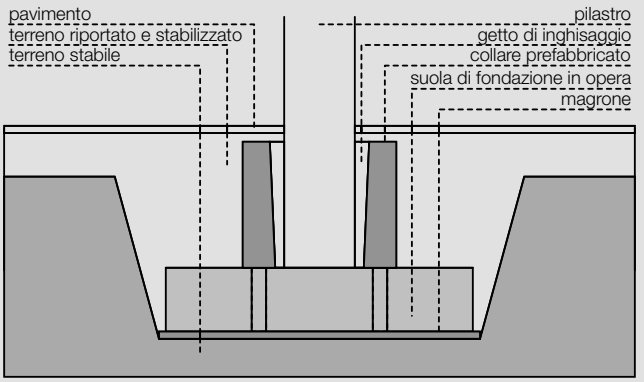
Grazie all'utilizzo di un impianto innovativo, siamo in grado di realizzare pilastri con molteplici sagome e risolvere le più svariate necessità strutturali.



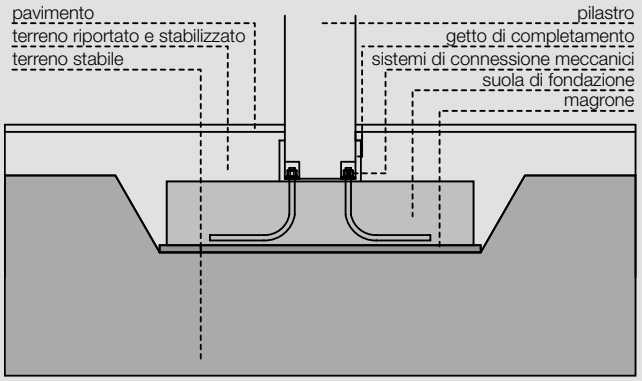
FONDAZIONI



Schema con plinto prefabbricato.



Schema con collare prefabbricato.



Schema dispositivo metallico di fissaggio.

Siamo in grado di fornire elementi per semplificare l'esecuzione delle fondazioni, come: plinti prefabbricati, collari prefabbricati e speciali dispositivi metallici per consentire il fissaggio meccanico del pilastro sul basamento di fondazione.
